A General Model for the Origin of Allometric Scaling Laws in Biology

Geoffrey B. West, James H. Brown, Brian J. Enquist

Santa Fe Institute, 1399 Hyde Park Road, Santa Fe, NM 87501, USA

Allometric scaling relations, including the 3/4 power law for metabolic rates, are characteristic of all organisms. Allometric scaling relations, including the 3/4 power law for metabolic rates, are characteristic of all organisms. Allometric scaling relations, including the 3/4 power law for metabolic rates, are characteristic of all organisms. Allometric scaling relations, including the 3/4 power law for metabolic rates, are characteristic of all organisms. Allometric scaling relations, including the 3/4 power law for metabolic rates, are characteristic of all organisms. Allometric scaling relations, including the 3/4 power law for metabolic rates, are characteristic of all organisms. Allometric scaling relations, including the 3/4 power law for metabolic rates, are characteristic of all organisms. Allometric scaling relations, including the 3/4 power law for metabolic rates, are characteristic of all organisms. Allometric scaling relations, including the 3/4 power law for metabolic rates, are characteristic of all organisms. Allometric scaling relations, including the 3/4 power law for metabolic rates, are characteristic of all organisms. Allometric scaling relations, including the 3/4 power law for metabolic rates, are characteristic of all organisms. Allometric scaling relations, including the 3/4 power law for metabolic rates, are characteristic of all organisms. Allometric scaling relations, including the 3/4 power law for metabolic rates, are characteristic of all organisms. Allometric scaling relations, including the 3/4 power law for metabolic rates, are characteristic of all organisms. Allometric scaling relations, including the 3/4 power law for metabolic rates, are characteristic of all organisms. Allometric scaling relations, including the 3/4 power law for metabolic rates, are characteristic of all organisms.
